

Vegetable Planting Schedule - Starting Indoors

These should be started indoors to get optimum growing for the season – be sure to check for supplier’s recommendations on when to seed, and optimum soil conditions, etc.

	March			April			May			June			July			August		
Cabbage			S							O				H				
Cauliflower			S							O				H				
Broccoli					S					O				H				
Leaf Lettuce						S				O		H						
Peppers						S				O								H
Tomatoes						S				O								H
Cucumbers										S	O						H	
Squash										S	O						H	
Melons						S					O							H

S	Start Indoors
O	Harden off outdoors
H	Harvest

- Cucumbers and Squash can typically do fine direct seeding as soon as danger of frost has passed.
- Allow plants to harden off by moving them into a sheltered spot outdoors for about a week before transplanting them to the garden

This chart is assuming that the first week of June is when the danger of all frost has passed. Please feel free to adjust your planting accordingly if you wish.
